How is it possible to evaluate the strengths and weaknesses of specific research projects? How can research findings be applied in social work practice? In an era where professions are increasingly being questioned and made more accountable for their actions, social workers are required to relate their activities more directly to research findings than ever before. In the modern evidence-based practice debate, there are many claims (and counter-claims) about the benefits of research and about its applicability to social work practice. There are also major disputes about what type of research is most valid to the concerns of social work. This book tackles these debates with a view to clarifying the issues for students and practitioners in social work and social care fields. In particular, the book examines: The political and ideological disputes surrounding the evidence-base debate in social work A wide range of research into social work with children, older people, mental illness and disability The three main paradigms of social research - objectivist, subjectivist and critical How research knowledge can be applied to practice Applying Research in Social Work Practice presents social work students and practitioners with the background to the key current issues relating to social work practice and social research. It also provides guidance on the skills needed to evaluate the strengths and weaknesses of a range of research

studies. Finally, it offers help and guidance about how research can actually be applied in practice. **Global Practices and Training in Applied Sport, Exercise, and Performance Psychology A Case Study Approach** Psychology Press Global Practices and Training in Applied Sport, Exercise, and Performance Psychology offers case analysis as a vehicle to address issues and experiences in the application of sport, exercise, and performance psychology (SEPP) and the supervision/training of individuals to become professionals in the field. A follow-up to *Becoming a Sport, Exercise, and Performance Psychology Professional* (2014), this book features a discussion of real-world case examples which highlight various aspects of professional practice as well as supervision and training. Professionals from around the world, including the United States and Canada, Europe, Asia, Africa, and Australia share diverse experiences, providing a uniquely in-depth, global perspective. The case studies contained in the book were selected to provide insight into specific elements of applied practice and supervision/training through a global lens as well as demonstrate the value of incorporating case analysis and reflection into one's training and continued professional development. Case analysis is an essential part of learning and instruction. Beyond educating the reader about theories and research on related topics in the field, case analysis allows for more complex levels of learning, including analysis, synthesis, and evaluation of diverse scenarios. In Part I of this book, the cases focus on applied SEPP practice; Part II is comprised of cases that focus on training and supervision. This book is essential reading for graduate students and neophyte professionals in the field for whom it is critical to learn how to effectively apply knowledge to real-world sport, exercise, and performance psychology scenarios. This problem was studied in New Zealand GPs using Optimal Foraging Theory developed in ecology. GPs' information search strategies were modelled as sequential steps associated with costs and benefits measured from logbooks of actual searches. By consulting the most profitable sources, switching sources when unsuccessful, and double checking, GPs seem close to an optimal trade-off between maximizing search success and information reliability, and minimizing searching time. Subsidised training in information searching and provision of a literature search service are two inferred avenues to access medical evidence. **Theoretical Scholarship and Applied Practice** Berghahn Books Academics across the globe are being urged by universities and research councils to do research that impacts the world beyond academia. Yet to date there has been very little reflection amongst scholars and practitioners in these fields concerning the relationship between the theoretical and engaged practices that emerge through such forms of scholarship. *Theoretical Scholarship and Applied Practice* investigates the ways in which theoretical research has been incorporated into recent applied practices across the social sciences and humanities. This collection advances our understanding of the ethics, values, opportunities and challenges that emerge in the making of engaged and interdisciplinary scholarship. **How to Practice Evidence-Based Psychiatry Basic Principles and Case Studies** American Psychiatric Pub The use of evidence-based guidelines and algorithms is widely encouraged in modern psychiatric settings, yet many practitioners find it

challenging to apply and incorporate the latest evidence-based psychosocial and biological interventions. Now, practitioners have an outstanding new resource at their fingertips. *How to Practice Evidence-Based Psychiatry: Basic Principles and Case Studies* accomplishes two goals: it explains the methods and philosophy of evidence-based psychiatry, and it describes ways in which psychiatrists and other mental health specialists can incorporate evidence-based psychiatry into their clinical practices. Uniquely relevant to psychiatric clinicians, this is the only book on evidence-based medicine specific to the field of psychiatry that addresses integrated psychopharmacology and psychotherapies. This new book first provides an expansion on the popular text *the Concise Guide to Evidence-Based Psychiatry*, updating the sections on clinical trials, the teaching of evidence-based medicine, and the effective treatment of patients with complex comorbid conditions. It then allows experts from a variety of specialty areas and practice settings to describe how they incorporate the latest evidence and outcome studies into interesting and inspiring cases of their own. The book starts with the assumption that clinicians must adapt guidelines, algorithms, other sources of evidence, and the interpretation of this evidence to each individual patient. It describes basic statistical concepts in an easily understood format and offers separate chapters devoted to systematic reviews and meta-analyses, clinical practice guidelines, diagnostic tests, surveys of disease frequency, and prognosis and psychometric measurement. It also presents an easily relatable discussion of many of the major issues of evidence-based psychiatry, such as use of the "Five-Step" evidence-based medicine model. The first section can be used both as an introduction to the topic and a ready reference for researching the literature and appraising evidence. The second section includes relevant case examples of major psychiatric disorders, and the third presents case examples from diverse treatment settings. In these sections, 24 contributing clinicians from a variety of practice settings discuss situations in which they followed aspects of evidence-based care. The text includes tables and charts throughout the text, including algorithms, guidelines, and examples of simple, therapist-devised measures of progress, further enhance learning, retention, and clinical practice. *How to Practice Evidence-Based Psychiatry: Basic Principles and Case Studies* is a valuable new tool that will help residents, practicing psychiatrists, and other mental health workers find the most useful and relevant information to inform and improve their everyday practices.

**Applied Practice Evidence and Impact in Theatre, Music and Art** Bloomsbury Publishing Applied Practice: Evidence and Impact in Theatre, Music and Art engages with a diversity of contexts, locations and arts forms – including theatre, music and fine art – and brings together theoretical, political and practice-based perspectives on the question of 'evidence' in relation to participatory arts practice in social contexts. This collection is a unique contribution to the field, focusing on one of the vital concerns for a growing and developing set of arts and research practices. It asks us to consider evidence not only in terms of methodology but also in the light of the ideological, political and pragmatic implications of that methodology. In Part One, Matthew Reason and Nick Rowe reflect on evidence and impact in the participatory arts in relation to recurring conceptual and methodological motifs. These include issues of purpose and obliquity; the relationship between evidence and knowledge; intrinsic and instrumental impacts, and the value of participatory research. Part Two explores the diversity of perspectives, contexts and methodologies in examining what it is possible to know, say and evidence about the often complex and intimate impact of participatory arts. Part Three brings together case studies in which practitioners and practice-based researchers consider the frustrations, opportunities and successes they face in addressing the challenge to produce evidence for the impact of their practice.

This book presents 23 articles by key researchers exploring the ways in which applied linguistics can play a role making a difference in people's lives. It is a timely publication when access to powerful discourses is increasingly an issue for many of the world's populations. The book showcases the contribution of applied linguists working in such areas as language teaching and learning, policy development, discourse analysis, language assessment, language development and bilingualism in the UK, Asia and Australasia. The book is aimed at teachers, teacher educators, undergraduate and postgraduate students who are working in the areas of the applied linguistics and language education, but also to anyone with an interest in language and the impact that it has on our lives. "The whole idea is that so many of us live our lives applying linguistics and yet we don't even think about it". - Shirley Brice Heath, in Heath and Kramsch (2004, 82): **Individuals, Institutions and the Uses of Literacy: Shirley Brice Heath and Claire Kramsch in Conversation.** *Journal of Applied Linguistics*, 1(1):75-94. **Using Story to Enrich Learning and Teaching In Higher Education and Professional Development** Routledge Story is everywhere in human lives and cultures and it features strongly in the processes of teaching and learning. Story can be called narrative, case study, critical incident, life history, anecdote, scenario, illustration or example, creative writing, storytelling; it is a unit of communication, it is in the products of the media industries, in therapy and in our daily acts of reflecting. Stories are 'told' in many ways - they are spoken, written, filmed, mimed or acted, presented as cartoons and in new media formats and through all these, they are associated with both teaching and learning processes but in different ways and at different levels. As a result of growing interest and simultaneous confusion about story, it is timely to untangle the various meanings of story so that we can draw out and extend its value and use. *Using Story* aims to clarify what we mean by story, to seek out where story occurs in education and life and to explore the processes by which we learn from story. In this way the book intends to 'bring story into the open' and improve its use. Building on her wealth of experience in the field, Jenny Moon explores the theory of story and demonstrates both its current uses and new ways in which to enrich and enliven teaching, learning and research processes. Ideal for anyone involved in education, personal or professional development or with a more general interest in story, the book begins by considering the range of what is meant by story, and then considers the theory behind the meanings. In the large final part of the book, Jenny provides a rich patchwork of different uses of story in education that cut across forms of story, story activities, disciplines and applications all of which will aid the use of story. **Preservation Issues and Planning** American Library Association **Preservation: Issues and Planning** provides a definitive and authoritative analysis of how to plan for and ensure the long-term health of an institution's collection in this digital age. **New Pattern NTA JEE Main Quick Guide in Chemistry with Numeric Answer Questions 3rd Edition** Disha Publications As NTA introduces Numeric Answer Questions in JEE Main, Disha launches the Questions' the 3rd latest updated edition of 'New Pattern NTA JEE Main Quick Guide in Chemistry with Numeric Answer Questions'. What decision-making process is followed by successful researchers? The *Research Process in Sport, Exercise and Health* fills an important gap in the research methods literature.
