Mechanics of Aircraft Structures John Wiley & Sons Mechanics of Aircraft Structures, Second Edition is the revised update of the original bestselling textbook about aerospace engineering. This book covers the materials and analysis tools used for aircraft structural design and mechanics in the same easy to understand manner. The new edition focuses on three levels of coverage driven by recent advances in industry: the increase in the use of commercial finite element codes require an improved capability in students to formulate the problem and develop a judgement of the accuracy of the numerical results; the focus on fracture mechanics as a tool in studying damage tolerance and durability has made it necessary to introduce students at the undergraduate level to this subject; a new class of materials including advanced composites, are very different from the traditional metallic materials, requiring students and practitioners to understand the advantages the new materials make possible. This new edition will provide more homework problems for each chapter, more examples, and more details in some of the derivations. Radio, Public Life and Citizen Deliberation in South Africa Routledge This book critically analyses the important role of radio in public life in post-apartheid South Africa. As the most widespread and popular form of communication in the country, radio occupies an essential space in the deliberation and the construction of public opinion in South Africa. From just a few state-controlled stations during the apartheid era, there are now more than 100 radio stations, reaching vast swathes of the population and providing an

important space for citizens to air their views and take part in significant socio-economic and political issues of the country. The various contributors to this book demonstrate that whilst print and television media often serve elite interests and audiences, the low cost and flexibility of radio has helped it to create a 'common' space for national dialogue and deliberation. The book also investigates the ways in which digital technologies have enhanced the consumption of radio and produced a sense of imagined community for citizens, including those in marginalised communities and rural areas. This book will be of interest to researchers with an interest in media, politics and culture in South Africa specifically, as well as those with an interest in broadcast media more generally.
