Integrative Long-Term Supply Chain Demand Planning

Logos Verlag Berlin GmbH *Integrative planning in supply chains is an essential field in logistics management. But still there are open questions especially in a long-term perspective: In order to align strategic decisions of several supply chain partners an integrated long-term demand planning process is necessary but in many industries still missing. This would enable companies for example to coordinate their long-term investments in production facilities as well as transport and storage capacities and therefore increase overall efficiency in supply chains. This edition gives a very good outline about the basic problem, providing further an innovative stepwise approach to solve the integrated planning problem. The concept is matched with the business case 'BP' as a typical company and industry with influential long-term changes ahead. By this business example implementation the real life value of such planning instruments can be shown. This will motivate many companies and industries to transfer the concept to their specific environments in order to further optimize their supply chains in the future.*

Seeking Evidence of Archetype Change in Dutch and English Higher Education

Springer *Elke Weyer sheds light on the question why, after more than three decades of higher education reforms in some countries, it is still not clear whether the reforms have achieved their stated goals, i.e., to create autonomous universities that meet political expectations. By back-casting real-life decision-making processes, the author reconstructs how different types of actors influenced the academic governance of higher education institutions in the context of these reforms. This approach highlights how numerous changes in governance and organisation affect the relationships between actors and how they promote their interests.*
