The Oblique Place

Hachette UK "Caterina Pascual Söderbaum has left a major European literary work of art as her legacy" STEVE SEM-SANDBERG, author of Emperor of Lies The Oblique Place is a captivating journey of the imagination, a prize-winning novel that probes the ruinous legacies of Fascist Europe in the twentieth century. The discovery of photographs in an album - of her Spanish grandfather who joined Hitler's Wehrmacht and her father in the uniform of Franco's army- leads Caterina Pascual Söderbaum to explore her family's links to some of the most abhorrent passages of twentieth-century history. Her mother turns out to be related to Kristina Söderbaum, a celebrated Swedish film star of the Third Reich, adored by Goebbels. She travels with husband and child to the shores of the idyllic Attersee in Austria, where the officers of the extermination camps spent their holidays. The journey continues from Schloss Hartheim, where the staff of the Nazi euthanasia programme forgot, with the help of alcohol and sex, the horrors that took place there, to the Villa Saint-Jean, where malnourished children from France's internment camps were sent to recover. This imaginative rediscovery of her own family's disturbing history is fused with vividly captured episodes from other lives and times, and the threads of evil that she lays bare are described in language so beautiful, so subtle and painterly, that her odyssey is at once shattering and mesmerising. TeeJay General Maths 4G

This book, along with General Book 3G covers in depth the entire contents of the General Course. It is also an invaluable resource which can easily be used to cover the outcomes of the new CfE National 4 course being introduced to Scottish schools. It is a pupil friendly book and is one of our biggest selling resources. We found that pupils who struggled with the complexities of other General resources on the market, and who found the sudden change of pace and the level of difficulty too great to cope with, felt a lot more comfortable with our 3G and 4G textbooks. In Book 3G, we truncated the work in some chapters, for example: Pythagoras - Hypotenuse only Circle work - Circumference only Trigonometry - Tangent only (Tan tables at back of book), in order to allow pupils to have access to these topics and feel confident with the work without burdening them with all the "tricky bits"! Though the missing topics from these chapters were covered in the Extension Materials in 3G, they are re-produced in this book with changed numbers.

Improving Advanced Study of Mathematics and Science in U.S. High Schools

National Academies Press This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

Health Benefits of Mediterranean Diet

MDPI Growing evidence shows that a dietary pattern inspired by Mediterranean diet principles is associated with numerous health benefits. A Mediterranean-type diet has been demonstrated to exert a preventive effect toward cardiovascular diseases, in both Mediterranean and non-Mediterranean populations. Part of these properties may depend on a positive action toward healthier metabolism, decreasing the risk of diabetes and metabolic-syndrome-related conditions. Some studies also suggested a potential role in preventing certain cancers. Finally, newer research has showed that a higher adherence to the Mediterranean diet is associated with a lower risk of cognitive decline, depression, and other mental disorders. Overall, a better understanding of the key elements of this dietary pattern, the underlying mechanisms, and targets, are needed to corroborate current evidence and provide insights on new and potential outcomes. This Special Issue welcomes original research and reviews of literature concerning the Mediterranean diet and various health outcomes: Observational studies on established nutritional cohorts (preferred), case-control studies, or population sample on the association with non-communicable diseases; Level of evidence on the association with human health, including systematic reviews and metaanalyses; Evaluation of application of Mediterranean diet principles in non-Mediterranean countries; Description of mechanisms of action, pathways, and targets at the molecular level, including interaction with gut microbiota.

Spectral Arctic

A History of Dreams and Ghosts in Polar Exploration

UCL Press Visitors to the Arctic enter places that have been traditionally imagined as otherworldly. This strangeness fascinated audiences in nineteenth-century Britain when the idea of the heroic explorer voyaging through unmapped zones reached its zenith. The Spectral Arctic re-thinks our understanding of Arctic exploration by paying attention to the importance of dreams and ghosts in the quest for the Northwest Passage. The narratives of Arctic exploration that we are all familiar with today are just the tip of the iceberg: they disguise a great mass of mysterious and dimly lit stories beneath the surface. In contrast to oft-told tales of heroism and disaster, this book reveals the hidden stories of dreaming and haunted explorers, of frozen mummies, of rescue balloons, visits to Inuit shamans, and of the entranced female clairvoyants who travelled to the Arctic in search of John Franklin's lost expedition. Through new readings of archival documents, exploration narratives, and fictional texts, these spectral stories reflect the complex ways that men and women actually thought about the far North in the past. This revisionist historical account allows us to make sense of current cultural and political concerns in the Canadian Arctic about the location of Franklin's ships.

Why Love Matters

How affection shapes a baby's brain

Routledge Why Love Matters explains why loving relationships are essential to brain development in the early years, and how these early interactions can have lasting consequences for future emotional and physical health. This second edition follows on from the success of the first, updating the scientific research, covering recent findings in genetics and the mind/body connection, and including a new chapter highlighting our growing understanding of the part also played by pregnancy in shaping a baby's future emotional and physical well-being. Sue Gerhardt focuses in particular on the wide-ranging effects of early stress on a baby or toddler's developing nervous system. When things go wrong with relationships in early life, the dependent child has to adapt; what we now know is that his or her brain adapts too. The brain's emotion and immune systems are particularly affected by early stress and can become less effective. This makes the child more vulnerable to a range of later difficulties such as depression, anti-social behaviour,

addictions or anorexia, as well as physical illness. **Why Love Matters** is an accessible, lively, account of the latest findings in neuroscience, developmental psychology and neurobiology - research which matters to us all. It is an invaluable and hugely popular guide for parents and professionals alike.

And it's only the beginning of his plans for revenge on a world where cancer support groups have the corner on human warmth.
