CHEMISTRY: AN ATOMS FIRST APPROACH

Cengage Learning Steve and Susan Zumdahl's texts focus on helping students build critical thinking skills through the process of becoming independent problem-solvers. They help students learn to think like a chemists so they can apply the problem solving process to all aspects of their lives. In CHEMISTRY: AN ATOMS FIRST APPROACH, the Zumdahls use a meaningful approach that begins with the atom and proceeds through the concept of molecules, structure, and bonding, to more complex materials and their properties. Because this approach differs from what most students have experienced in high school courses, it encourages them to focus on conceptual learning early in the course, rather than relying on memorization and a plug and chug method of problem solving that even the best students can fall back on when confronted with familiar material. The atoms first organization provides an opportunity for students to use the tools of critical thinkers: to ask questions, to apply rules and models and to evaluate outcomes. CHEMISTRY IN QUANTITATIVE LANGUAGE

FUNDAMENTALS OF GENERAL CHEMISTRY CALCULATIONS

Oxford University Press Problem-solving is one of the most challenging aspects students encounter in general chemistry courses, leading to frustration and failure. Consequently, many students become less motivated to take additional chemistry courses after the first year. This book tackles this issue head on and provides innovative, intuitive, and systematic strategies to tackle any type of calculations encountered in chemistry. The material begins with the basic theories, equations, and concepts of the underlying chemistry, followed by worked examples with carefully explained step-by-step solutions to showcase the ways in which the problems can be presented. The second edition contains additional problems at the end of each chapter with varying degrees of difficulty, and many of the original examples have been revised.

THE FORMATION OF F-CENTERS IN SOLID SOLUTIONS OF KCl-KBr

The relationships of F-center concentration in KCl-KBr solid solutions to x-ray exposure and to solid solution percentage composition were determined. The typical concentration vs. exposure plot shows a rapid nonlinear initial growth of F-centers, followed by a slow linear growth. F-center concentration was found to decrease nearly additively with increasing KBr content.
