SCHINDLER'S LIST

Simon and Schuster In remembrance of the 75th anniversary of the liberation of Auschwitz and the Nazi concentration camps, this award-winning, bestselling work of Holocaust fiction, inspiration for the classic film and “masterful account of the growth of the human soul” (Los Angeles Times Book Review), returns with an all-new introduction and beautifully redesigned cover. An “extraordinary” (New York Review of Books) novel based on the true story of how German war profiteer and factory director Oskar Schindler came to save more Jews from the gas chambers than any other single person during World War II. In this milestone of Holocaust literature, Thomas Keneally, author of *The Book of Science and Antiquities* and *The Daughter of Mars*, uses the actual testimony of the Schindlerjuden—Schindler’s Jews—to brilliantly portray the courage and cunning of a good man in the midst of unspeakable evil. “Astounding...in this case the truth is far more powerful than anything the imagination could invent” (Newsweek).

A PROMETHEUS ON A HUMAN SCALE - IGNACY ŁUKASIEWICZ

Peter Lang GmbH, Internationaler Verlag Der Wissenschaften This book is dedicated to the life and work of Ignacy Lukaszewicz, Polish pharmacist whose world-renowned achievements include construction of the world's first oil refinery and invention of the modern kerosene lamp. The authors also portray the history of the Galician oil industry and set it in the context of political, social and technological changes taking place in the 19th-century Central and Eastern Europe. "The work adds substantially to existing scholarship in English. As the author of the only English-language academic monograph devoted to a general history of the Galician oil industry, I can attest that this manuscript adds significant and important information, details, depth of investigation that is not provided in my book or any other book. It therefore makes a novel contribution that will be very valuable to anyone looking for a truly detailed account of Ignacy Lukaszewicz's contribution within the context of the Galician oil industry in general." Alison Frank Johnson Professor of History and of Germanic Languages and Literatures Harvard University, Center for European Studies "The authors sketch the profiles of two outstanding Poles, pioneers of the oil industry - Ignacy Lukaszewicz, MSc. in Pharmacy, and mining engineer and geologist Witold Zglenicki, called the Polish Nobel (...) HANDBOOK OF MATERIALS FOR WIND MUSICAL INSTRUMENTS

Springer Nature This book addresses key questions about the materials used for the wind instruments of classical symphony orchestra such as flutes, clarinets, saxophones, oboes, bassoons and pipe organs. The content of this book is structured into four parts. Part 1- Description of materials for wind instruments deals with wood species and materials for reeds used for making clarinet, oboe and bassoon- and, with metallic materials and alloys for - horn, trumpet, trombone, etc. Auxiliary materials associated with the manufacturing of wind instruments are felt, cork, leather and parchment. Part 2- Basic acoustics of wind instruments, in which are presented succinctly, some pertinent aspects related to the physics of the resonant air column. An important aspect discussed is related to the effect of wall material on the vibration modes of the walls of wind instruments. The methods for measuring the acoustical properties of wind instruments are presented. Part 3- Manufacturing of wind instruments, describes the technology used in manufacturing metallic tubes and pipes made of wood. Part 4 - The durability and degradation of materials addresses data about methods for cleaning wind instruments, studies factors producing degradation of organ pipes, describes methods of conservation and restoration of brass instruments and of historical pipe organs. Finally, the properties of marble are described, being the only one nondegradable and sustainable material used for pipes for organs.

PHYSICAL METALLURGY AND PROCESSING OF INTERMETALLIC COMPOUNDS

Springer Science & Business Media The attractive physical and mechanical properties of ordered intermetallic alloys have been recognized since early in this century. However, periodic attempts to develop intermetallics for structural applications were unsuccessful, due in major part to the twin handicaps of inadequate low-temperature ductility or toughness, together with poor elevated-temperature creep strength. The discovery, in 1979, by Aoki and Izumi in Japan that small additions of boron caused a dramatic improvement in the ductility of Ni₃Al was a major factor in launching a new wave of fundamental and applied research on intermetallics. Another important factor was the issuance in 1984 of a National Materials Advisory Board report entitled "Structural Uses for Ductile Ordered Alloys," which identified numerous potential defense-related applications and proposed the launching of a coordinated development program to gather engineering property and processing data. A substantial research effort on titanium aluminides was already underway at the Air Force Materials Laboratory at Wright Patterson Air Force Base in Ohio and, with Air Force support, at several industrial and university laboratories. Smaller programs also were under way at Oak Ridge National Laboratory, under Department of Energy sponsorship. These research efforts were soon augmented in the United States by funding from Department of Defense agencies such as Office of Naval Research and Air Force Office of Scientific Research, and by the National Science Foundation.

THE ROAD TO RESCUE

THE UNTOLD STORY OF SCHINDLER'S LIST

Other Press, LLC “Don’t thank me for your survival, thank your valiant Stern and Pemper, who stared death in the face constantly.”—Oskar Schindler in a speech to his released Jewish workers in May 1945. Steven Spielberg’s Oscar-winning film Schindler’s List popularized the true story of a German businessman who manipulated his Nazi connections and spent his personal fortune to save some 1,200 Jewish prisoners from certain death during the Holocaust. But few know that those lists were made possible by a secret strategy designed by a young Polish Jew at the Płaszow concentration camp. Mietek Pemper’s compelling and moving memoir tells the true story of how Schindler’s list really came to pass. Pemper was born in 1920 into a lively and cultivated Jewish family for whom everything changed in 1939 when the Germans invaded Poland. Evicted from their home, they were forced into the Krakow ghetto and, later, into the nearby camp of Płaszow where Pemper’s knowledge of the German language was put to use by the sadistic camp commandant Amon Goth. Forced to work as Goth’s personal stenographer from March 1943 to September 1944—an exceptional job for a Jewish prisoner—Pemper soon realized that he could use his position as the commandant’s private secretary to familiarize himself with the inner workings of the Nazi bureaucracy and exploit the system to his fellow detainees’ advantage. Once he gained access to classified documents, Pemper was able to pass on secret information for Schindler to compile his famous lists. After the war, Pemper was the key witness of the prosecution in the 1946 trial against Goth and several other SS officers. The Road to Rescue stands as a historically authentic testimony of one man’s unparalleled courage, wit, defiance, and bittersweet victory over the Nazi regime.
