Statistical Issues in Drug Development

[John Wiley & Sons](#) *Drug development is the process of finding and producing therapeutically useful pharmaceuticals, turning them into safe and effective medicine, and producing reliable information regarding the appropriate dosage and dosing intervals. With regulatory authorities demanding increasingly higher standards in such developments, statistics has become an intrinsic and critical element in the design and conduct of drug development programmes. Statistical Issues in Drug Development presents an essential and thought provoking guide to the statistical issues and controversies involved in drug development. This highly readable second edition has been updated to include: Comprehensive coverage of the design and interpretation of clinical trials. Expanded sections on missing data, equivalence, meta-analysis and dose finding. An examination of both Bayesian and frequentist methods. A new chapter on pharmacogenomics and expanded coverage of pharmaco-epidemiology and pharmaco-economics. Coverage of the ICH guidelines, in particular ICH E9, Statistical Principles for Clinical Trials. It is hoped that the book will stimulate dialogue between statisticians and life scientists working within the pharmaceutical industry. The accessible and wide-ranging coverage make it essential reading for both statisticians and non-statisticians working in the pharmaceutical industry, regulatory bodies and medical research institutes. There is also much to benefit undergraduate and postgraduate students whose courses include a medical statistics component.*

Introduction to the Practice of Statistics

[W. H. Freeman](#) *Introduction to the Practice of Statistics (IPS)* shows students how to produce and interpret data from real-world contexts—doing the same type of data gathering and analysis that working statisticians in all kinds of businesses and institutions do every day. With this phenomenally successful approach originally developed by David Moore and George McCabe, statistics is more than just a collection of techniques and formulas. Instead, students develop a systematic way of thinking about data, with a focus on problem-solving that helps them understand statistical concepts and master statistical reasoning.

Constructing Methodology for Qualitative Research

Researching Education and Social Practices

[Springer](#) This book explores the webs of vulnerability in methodological decision-making that illustrate the deceptive strength of qualitative research. Each chapter will resonate with readers differently as they read themselves into the tensions and tangles of qualitative research when confronted with the challenges of establishing methodological frameworks for educational and social enquiry. The authors are postgraduate, early career researchers and supervisors who analyse their methodological encounters with the nimble, fluid, messy and iterative processes of qualitative research. The book flows structurally from positioning the researcher within these processes to the manoeuvring of self across necessarily selective social science disciplines in education, arts and humanities. It rejuvenates the pioneering spirit, the sense of mission and innovativeness of qualitative research.
